Livestock and Animal Products Production are a very promising directions of investments, although it has a longer payback period in comparison with crop production and aquaculture. But it is promising because the market of livestock products is far from full saturation, and the demand for quality meat and milk grows annually

Greenhouses - a very good direction of investments, although it requires a lot of capital and resources. In greenhouses, it is possible to produce agricultural crops and vegetables without large risks, since all factors are regulated, which is a great competitive advantage in comparison with outdoor agricultural crops production

Storage (construction of elevators and grain terminals), processing, river and sea logistics, international trade of agricultural products is one of the most profitable and good directions of investments, although it requires very large investments

Solar power stations are the most profitable now energy business in many countries, as the green tariff working. In terms of payback period and the necessary investments - solar green energy is now No. 1 in the energy business, as the era of oil and coal is already leaving irrevocably. Moreover, this business is friendly with agricultural production, and can substantially supplement it, giving a high income. Along with aquaculture - this is a "hit" of investments now
